

ALPHA SHIELD® FRA FLAME RETARDANT PROTECTION

These flame retardant, 48in x 96in ultra-heavy-duty sheets are designed with support pockets, creating high-compression protection, spreading the load of objects and machinery across the entire surface of the product. The fabric-backing prevents scratches against the finished surface while the textured face promotes grip. The product's formulation will allow the product to resist warping, even when exposed to direct sunlight or external environments.

Alpha Shield can be used for virtually any job. It is tough enough to withstand forklift and other jobsite machinery, yet light enough to be used for vertical applications.

Tested and certified to meet NFPA 701 standards.
